1 Analysis

1.1 A1

1.1.1 Requirements & Domain-Knowledge

Requirements

- R1 Customers can create an account by providing an e-mail address and a password.
- R2 If an e-mail address which is already associated with an account is provided during registration, account creation fails.
- R3 Customers can log in by providing their e-mail address and their password.
- R4 A logged in customer can log out.
- R5 A customer can browse available showings, ascendingly sorted by date.
- R6 A logged in customer can book tickets by selecting the showing from the browsing list and selecting the desired seats.
- R7 A showing can only be booked up to 15 minutes before it starts.
- R8 Staff can add new showings to the database by providing the required data.
- R9 Once a showing starts it is marked as "archived".
- R10 Archived showings are visible to staff, but not to customers.
- R11 Staff can cancel showings.
- R12 When a showing is cancelled it is deleted.
- R13 When a showing is cancelled the customers who booked tickets for it are notified via e-mail.
- R14 Showings which took place a year ago or longer are automatically removed from the database.
- R15 When a showing is deleted its associated bookings are also deleted

Facts

- F1 A showing consists of the title of the movie, its duration, the date date, the hall number and unique ID.
- F2 A hall consists of a number of rows, a number of seats per row and a unique hall number.
- F3 Only one person at a time can sit in a seat.

Assumptions

- A1 A web application is a good choice for implementing the desired functionality and all customers are able to use it.
- A2 Customers only provide e-mail addresses they can access.
- A3 Customers will stay up to date with the list of available showings.
- A4 The cinema operator has provided a predefined list of cinema halls.
- A5 Every booking is paid via an external service.
- A6 Staff will only add showings which take place in the future.

1.1.2 Contextdiagram

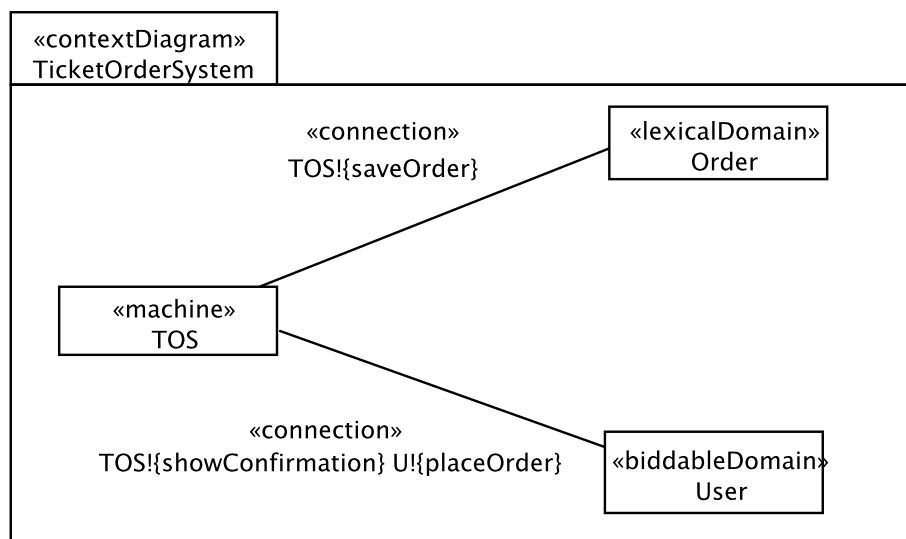

Figure 1.1: Contextdiagram

1.2 A2

We can derive the following problem diagrams

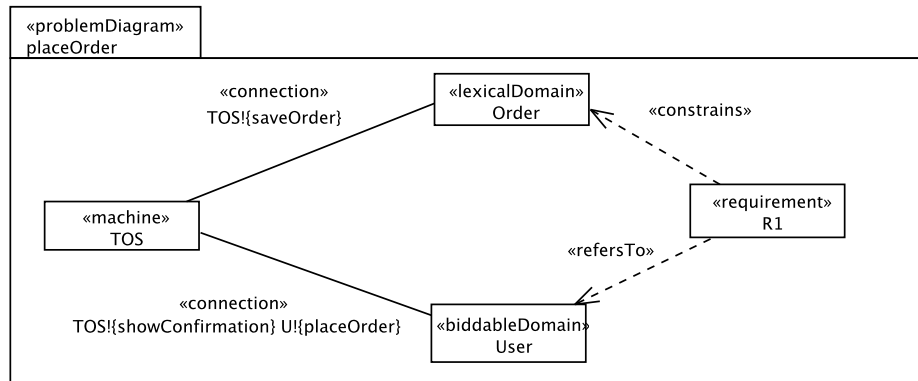

Figure 1.2: Problemdiagram for R1

1.3 A3

1.4 A4

1.5 A5

A short OCL example:

```
1 context Person inv: self.alter >=0
2
3 pre alter >30
4 post alter=alter@pre+1
```

1.6 A6

Examples of a life-cycle using the math-environment:

$$LC_{guest} = (Browse^+; [Book])^*$$

2 Design

2.1 D1

2.2 D2

2.3 D3

2.4 D4

State diagrams with tikZ:
