1 Analysis

1.1 A1

1.1.1 Requirements & Domain-Knowledge

Requirements

- R1 Customers can create an account by providing an e-mail address and a password. If an e-mail address which is already associated with an account is provided, account creation fails.
- R2 Customers can log in by providing their e-mail address and their password.
- R3 A logged in customer can log out.
- R4 A customer can browse available showings, ascendingly sorted by date.
- R5 A logged in customer can book tickets by selecting the showing from the browsing list and selecting the desired seats. A showing can only be booked up to 15 minutes before it starts.
- R6 Staff can add new showings to the database by providing the required data.
- R7 Once a showing starts it is marked as "archived".
- R8 Archived showings are visible to staff, but not to customers.
- R9 Staff can cancel showings. When a show is cancelled all customers who booked tickets for it are notified via e-mail and the showing is then deleted.
- R10 Showings which took place a year ago or longer are automatically removed from the database.
- R11 When a showing is deleted its associated bookings are also deleted.

Facts

- F1 A showing consists of the title of the movie, its duration, the date date, the hall number and unique ID.
- F2 A hall consists of a number of rows, a number of seats per row and a unique hall number.
- F3 Only one person at a time can sit in a seat.

Assumptions

- A1 A web application is a good choice for implementing the desired functionality and all customers are able to use it.
- A2 Customers only provide e-mail addresses they can access.
- A3 Customers will stay up to date with the list of available showings.
- A4 Every booking is paid via an external service.
- A5 Staff will only add showings which take place in the future.

1.1.2 Contextdiagram

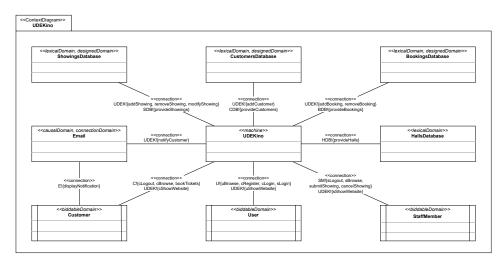

Figure 1.1: Contextdiagram

1.2 A2

We can derive the following problem diagrams

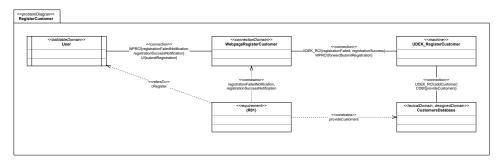

Figure 1.2: Problem diagram for R1

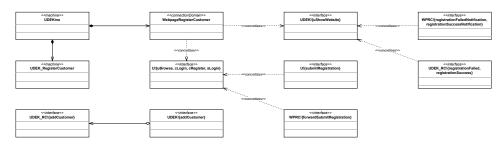

Figure 1.3: Mapping diagram for R1

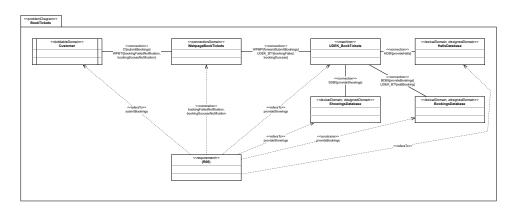

Figure 1.4: Problem diagram for R5

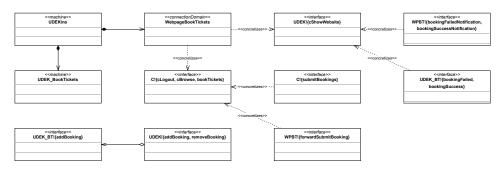

Figure 1.5: Mapping diagram for R5

Figure 1.6: Problem diagram for R4 / R8 $\,$

Figure 1.7: Mapping diagram for R4 / R8 $\,$

Figure 1.8: Problem diagram for R7

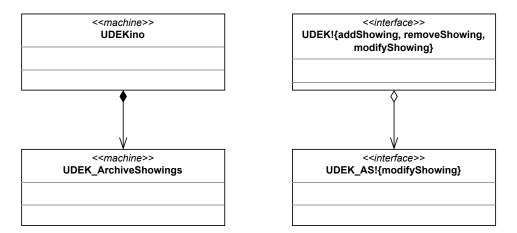

Figure 1.9: Mapping diagram for R7

Frames

- ullet R1 fits to update 2
- \bullet R5 fits to update 2
- $\bullet~\mathrm{R4}$ / R8 fits to query 2
- R7 fits to simple transformation
